Accuracy-Constrained Efficiency Optimization for Detecting Drainage Crossing

- Demonstrated the efficacy of resource-aware Neural Architecture Search (NAS) in refining the hyperparameters of SPP-Net, leading to significant enhancements in inference efficiency.

- Performed comprehensive profiling of the drainage crossing detection models on GPU systems, pinpointing the performance bottlenecks unique to single GPU configurations.
- The related paper was accepted in **SC'23 Workshop** [W1] (First author).

AR/VR typing inference using head motion tracking
